

# Tips on Cleaning Spills for

# Carpet & Vinyl Flooring

## CARPET

Vacuum often the areas that receive the most traffic such as hallways, stairs, exterior entry ways and paths where there is constant wear. Industry experts recommend vacuuming the entire carpeted area a minimum of twice per week.

Removing loose soil while it remains on the surface is important so that it is not worked into the carpet pile by foot traffic. Removing embedded soil is more difficult and time consuming and time consuming than removing surface soil.

For maximum effectiveness, use a vacuum cleaner that has adjustable and rotating brushes that are able to loosen ground-in soil, and a strong enough airflow to penetrate to the backing, extracting all particles.

For the best cleaning results, no matter which type vacuum cleaner you purchase, inspect it periodically to be sure it is functioning properly.

## VINYL

Wipe up spills as soon as possible.

Wash your floor occasionally with a no-rinse floor cleaner.

Use a polish to return your floor's original shine if it begins to dull over time.

Do not use abrasive cleaners or abrasive scrubbing tools.
